

WE NEED THE

ATLANTIC COAST PIPELINE

The United States is home to abundant natural gas supplies, which are critical to meeting our increasing energy needs. As energy demand continues to grow, infrastructure projects like the proposed Atlantic Coast Pipeline that give Americans access to reliable, affordable energy are even more important. Along with providing a much-needed supply of natural gas, the Atlantic Coast Pipeline would create thousands of jobs and new, long-term revenue for West Virginia, Virginia, and North Carolina.

HOW THE ATLANTIC COAST PIPELINE HELPS CONSUMERS

BRIDGING SUPPLY AND DEMAND

The Atlantic Coast Pipeline will power the economic expansion already underway in West Virginia, Virginia and North Carolina. More energy resources are needed to meet this demand.

ENERGY SECURITY

The Atlantic Coast Pipeline will provide access to reliable domestic supplies of natural gas to power homes and businesses for generations to come.

SAVINGS TO CONSUMERS

Once operational, the Atlantic Coast Pipeline will bring abundant, affordable energy to the region, saving consumers an estimated \$377 million in energy costs every year.
